

Dicro Slide™

Dichroic Coated Paper

Using Dicro Slide

SUPPLY LIST:

- Cut pieces of clean glass in various sizes & colors.
- A shallow water container (try a sectioned plastic plate).
- Clean water and paper towels. Distilled water is recommended.
- Scissors and paper punches in a variety of shapes.
- Wooden skewers (6") for moving and positioning Dicro Slide on glass.
- Long handled tweezers. Use these carefully, they may mark the dichroic.
-

APPLYING DICRO SLIDE:

1. Cut or punch Dicro Slide into different shapes and sizes.
2. Soak the Dicro Slide pieces in $\frac{1}{4}$ " to $\frac{1}{2}$ " water for 1 to 2 minutes.
3. Remove Dicro Slide from Water, gently blot excess water on paper towel.
4. Carefully slide and position Dicro Slide onto glass, (it is stronger than it looks).
If Dicro Slide does not release easily, soak longer.
5. Try layering glass & Dicro Slide. Experiment, have fun!
6. Fuse as usual.

NOTE:

- Dicro Slide is compatible with any COE glass.
- Dicro Slide works well uncapped, but like all genuine Dichroic, does not fuse to itself or against other metals.
- Store Dicro Slide so coated sides of dichroic paper is not in contact with other coated dichroic paper surfaces.
