

Cleaning Glass Models

What should you do if your glass model gets dirty or dusty? There are different ways to clean it, depending on how much work you want to do.

If you're bored and want to spend a few hours at it, you can get a Q-tip or small paint brush and carefully and delicately brush out any dirt or dust. Or, you could do it the lazy way (the way we do it). Just wash it off. Hold it under the tap and run hot water over it, or (if it fits) just put it in the dishwasher. If you're especially lazy (which we often are) you can take it outside and hose it off with the garden hose the same way you wash your car.
